NASHVILLE
TENNESSEE

Catalogue No. 1

PREFACE

OUR attention has been called to criticisms of cement block houses as being unsightly and inartistic in appearance, and it is our purpose in presenting this book to the public to show that cement blocks properly made and properly used in building can and will make a house equal in appearance to and surpassing the natural stone. Each one of these houses was built by this Company with our regular cement block machine and with its regular attachments can make every style of a block used in building. This machine with all its attachments cost $200.00, f. o. b. the factory. The concrete was mixed with our regular mixer, which we offer for $150.00, f. o. b. the factory. This mixer will pay for itself in sixty days in the saving of labor. The columns for these houses were made on our moulds, which cost $30.00. The baluster molds cost $10.00.

We cordially invite those interested in the cement building industry and cement machinery to write to us for any and all information regarding the industry and the machines. We make a specialty of equipping cement block plants. Correspondence is solicited.

We have built in Nashville in the past two years thirty or more houses and we would be glad to have parties interested to visit Nashville, Tenn., to see the houses that are built, and being built, and see our block plant in the course of operation, which has a capacity of 1,200 blocks per day.
